SUMMARY

Lead DevOps Engineer with 10+ years of experience building scalable AWS platforms, Kubernetes systems, and CI/CD pipelines. Proven ability to improve reliability, reduce costs, secure and automate infrastructure at scale.

SKILLS

AI: LLM Fundamentals(Transformers, Tokens, RAG, Fine Tuning, Parameters, Evals, Embeddings, Vector Databases, Context Engineering (Prompts))

AI Tooling: Chat assistants(Claude, ChatGPT, Gemini), LangChain, Ollama

Cloud: AWS (EKS, ECS, EC2, VPC, S3, IAM, Lambda, DynamoDB, RDS, EMR, VPC, Cloudfront, Systems Manager, KMS, Security Hub..)

DevOps: Terraform, GitHub Actions, Jenkins, ArgoCD

Containers: Kubernetes, Docker, Helm

Scripting: Bash, YAML, Python

Observability: Splunk, New Relic, Prometheus, Grafana, OpenTelemetry, Cloudwatch, Cloudtrail

KEY IMPACT

- Saved \$30K/month through infrastructure and database optimization
- Reduced MTTR by 40% using observability improvements, Maintained 99.7%+ uptime
- Designed, Architected and Secured PCIDSS compliant infrastructure from 0 to 1
- Achieved zero-downtime Kubernetes upgrades across environments via Blue green & Canary deployments
- Implemented self-service portal for Developers with ArgoCD webUI resulting in reduction of deployment time by 400 percent and change failure rate by 33 percent

EXPERIENCE

- **Lead DevOps Engineer** Oct 2024 – Mar 2025
9Yards Technology *Remote*
 - Modernized legacy deployment workflows by designing AWS-based microservices and serverless architecture, improving system scalability and fault isolation
 - Reduced system coupling by implementing event-driven architecture using Lambda, API Gateway, SQS/SNS, and EventBridge
 - Improved incident response by implementing OpenTelemetry-based observability, reducing MTTR by 40%
 - Strengthened cloud security by migrating IAM users to role-based access via Terraform, eliminating long-lived credentials
 - Accelerated release cycles by building reusable GitHub Actions workflows, improving CI/CD efficiency
 - Improved system reliability by automating deployment validation and recovery workflows using Python and Shell
- **Senior Cloud Infrastructure Engineer** Apr 2023 – Jun 2024
Arkose Labs *Pune*
 - Reduced infrastructure cost by \$30K/month by leading database optimization and architecture improvements
 - Eliminated upgrade downtime by leading Kubernetes cluster upgrades (EKS 1.23 → 1.29) using rolling strategies
 - Improved deployment consistency by building CI/CD pipelines using GitHub Actions and ArgoCD
 - Enhanced system availability by implementing AZ-aware routing and high-availability architecture (99.9%+ uptime)
 - Enabled scalable infrastructure provisioning by developing reusable Terraform modules across environments
 - Maintained production stability by leading Kubernetes upgrades and resolving cluster-level issues

- **Technical Lead**

Dec 2020 – Apr 2023

Incedo Inc

Pune

- Improved platform reliability by managing Kubernetes infrastructure and optimizing deployment pipelines
- Reduced deployment failures by enhancing CI/CD pipelines using Jenkins and Terraform
- Strengthened application security by implementing Vault-based secrets management and IAM policies
- Improved incident resolution by introducing automation and structured on-call practices
- Performed AWS cloud optimisation & security assessment of org infrastructure with Amazon Trusted Advisor and Amazon Inspector
-

- **Data Engineer**

May 2019 – Dec 2020

Cratas Techno Solution

Pune

- Built organization's AWS infrastructure from scratch by designing VPC, EC2, S3, IAM, and networking layers, enabling scalable cloud adoption
- Improved deployment speed and reliability by implementing CI/CD pipelines using Jenkins, Git, and Maven
- Enhanced system security posture by implementing OS hardening, IAM policies, and PCIDSS compliance controls
- Automated infrastructure provisioning using Terraform and CloudFormation, reducing manual setup effort and errors
- Improved system observability by configuring CloudWatch monitoring, logging, and alerting mechanisms
- Reduced operational overhead by developing shell scripts for backups, monitoring, and system maintenance tasks

- **Senior Systems Engineer**

Jul 2016 – May 2019

Astron Systems

Nagpur

- Designed and managed Hadoop clusters (CDH/HDP) on AWS and bare metal, ensuring high availability and scalability
- Improved cluster performance by tuning MapReduce, Hive, and resource allocation strategies
- Enhanced cluster security by implementing Kerberos authentication and integrating with Active Directory
- Reduced downtime by implementing monitoring, alerting, and proactive troubleshooting workflows
- Automated cluster health checks and maintenance using shell scripting, reducing manual intervention
- Led capacity planning and infrastructure scaling initiatives to support growing data workloads

- **Senior Systems Engineer**

Jan 2014 – Jul 2016

Cognizant

Pune

- Managed production support for 50+ enterprise applications, ensuring SLA adherence and system stability
- Reduced incident resolution time by troubleshooting high-priority issues and implementing permanent fixes
- Led migration of legacy systems (Windows 2003 → 2008), improving performance and maintainability
- Improved deployment efficiency by configuring IIS and supporting release activities across environments
- Enhanced operational processes by following ITIL practices for incident, problem, and change management
- Collaborated with cross-functional teams and clients to resolve production issues and improve service delivery

CERTIFICATIONS

AWS Solutions Architect – Professional
Certified Kubernetes Administrator (CKA)
HashiCorp Certified Terraform Associate
Microsoft Azure Fundamentals

EDUCATION

B.E. Computer Science, Nagpur
